

SelloGeo – Dynamic Real Estate Property Viewer Website Development

1. Project Overview

The SelloGeo website is a modern, high-performance real estate platform designed for property browsing, advanced search, interactive viewing, and seamless client engagement. Built exactly according to the provided **SelloGeo Pages Features and Functionalities.pdf** and the linked Figma design file, the platform delivers a complete property discovery experience with 360° panoramas, before/after Future Vision comparisons, media/video hubs, Google Maps with GeoJSON geo-fencing, WhatsApp integration, Spanish language support, and a powerful dual-slot Admin Panel.

The solution is fully responsive, SEO-optimized, lazy-loaded for speed, and focused on user experience for visitors while giving full control to administrators. It is a single-page application style website with dynamic content, not a social platform — all features are strictly tied to property showcasing, lead generation, and operational efficiency.

The website will be developed for web browsers (desktop, tablet, mobile) with an integrated web-based Admin Panel for property management, media uploading, and reporting.

2. Pages and Sections

1. Home Page

- Hero banner with advanced search
- Featured properties, latest listings, interactive map teaser
- Testimonials, stats, and call-to-action sections
- Footer with quick links

2. Properties Page

- 1.1 Property and Real Estate Page (main catalog)
- 1.1.1 Media and Video Hub Page
- 1.1.2 Panorama View (360 degree) Page
- 1.1.3 Future Vision Page

3. Blogs Page (listing + individual dynamic posts)

4. FAQ Section (accordion style)

5. Contact Section (form + map + WhatsApp button)

Single Property Details View (accessed from listings) – rich dedicated page for every property.

3. Core Features & Functionalities

A. Search & Filtering

- Advance Search with keyword + location autocomplete + radius
- Search Filtering (15+ options: price range, property type, bedrooms, amenities, etc.)
- Live results update without page reload
- Multiple Property Views (Grid / List / Map toggle)

B. Property Viewing Experience

- Single Property Details Views (high-resolution gallery, specs, documents)
- Media and Video Hub (dedicated page + per-property embeds)
- 360° view of Property Images (full-screen interactive panorama)
- Future Vision (before/after slider or overlay comparison)
- Dynamic Price Management (admin-controlled pricing, discounts, currency)
- Google Map Integration with property pins and clustering

C. User Engagement & Performance

- WhatsApp Integration (floating button with pre-filled property details)
- Responsive Design (mobile-first, 100% Figma match on all devices)
- Performance First Lazy loading (images, videos, maps)
- Spanish Language Translation (full i18n with language switcher)
- SEO Supported Development (meta tags, schema markup, sitemap, Core Web Vitals)

D. Advanced Mapping

- Advanced Map Functionality (Interactive Geo-Fencing Map through GeoJSON data – draw zones, filter properties inside/outside)

4. Admin Panel (Web Only)

- Secure login with dual-slot Admin Uploader (two separate upload areas or multi-admin roles)
- Full CRUD for properties, blogs, FAQs, media, and pricing
- GeoJSON management for fencing zones
- Content moderation and approval workflows
- Analytics dashboard (views, leads, searches)
- Role-based permissions and audit logs
- Bulk upload support for images/videos

5. Data Privacy & Security

- Secure authentication and role-based access
- Encrypted media storage (AWS S3 / Cloudinary)
- GDPR-aligned data handling
- Full audit trail for admin actions
- No unnecessary data collection

6. Technology Stack

Layer	Technology
Frontend	Next.js
Backend	Nodejs/Laravel/Python (<i>We will set tech stack after R&D, with the Scope of Future Scale</i>)
Database	PostgreSQL
Maps	Google Maps API + Leaflet (GeoJSON support)
360° Viewer	Pannellum / Three.js
Media Storage	Cloudinary / AWS S3
Translation	I18next or relevant
Hosting/Deployment	AWS / DigitalOcean
Others	SEO tools, lazy loading, performance optimization

7. Development Phases

Phase	Task	Duration	Cost (USD)
Backend Development	Backend + Admin Panel + Integrations (WhatsApp, Spanish, Geo-Fencing) + Front End Development	3 Weeks	\$2,200
Frontend Development	Core Frontend + Advanced Features (Search, Maps, 360°, Future Vision) + API Implementation and Integration	2 Weeks	\$1,000
Test and Deployment	Testing, SEO, Performance Optimization, Deployment	Between 5 to 7 days	\$300
Total:			\$3,500

Total Cost: \$3,5000 USD

Note: Each Phase will Consider as an Independent Order, So after Completing any phase we will Deliver that phase and Send Another Offer To move Forward and Complete the entire Project Phase by phase.

Additionally, While working on the Last phase of this Project you must share your Hosting Credentials. So that we can deploy the Entire Application without delaying.

8. Post Delivery Assurance

- 30 days free bug-fixing and stabilization support
- 1 month free post-launch maintenance
- Complete source code handover via fiverr
- One training session (1–2 hours) via video call

Client Responsibilities:

- Provide all property content (images, videos, texts, GeoJSON data)
- Domain name and hosting account
- Any third-party API keys (Google Maps, WhatsApp Business, etc.)
